PROFILE Technology leader and senior engineer with 11 years across hedge funds, investment banking, fintech, retail banking, and enterprise software. Bridges quantitative finance, software architecture, and applied AI across large enterprises, mid-sized firms, and startups, delivering trading systems, quantitative models, cloud platforms, and internal AI products.

EXPERIENCE

11

years in engineering

Experience

APR 2025 – PRESENT

Capula Investment Management
Senior Developer

- As the most senior developer on a three-person Applied AI team, shape an AI chat platform with senior investment leadership, connecting it to internal systems and trading strategies for firm-wide rollout.
- Own the design and development of the platform's artifact system, enabling traders to generate and deploy custom dashboards and other interactive outputs directly from the chat.
- Independently led delivery of an order and portfolio management system for the Alternative Markets Alpha desk, working directly with the trading team from discovery through launch.
- Work on the Front Office Technology team's Trade Capture System while decommissioning legacy trade-booking systems.

MAR 2023 – MAR 2025

RBC Capital Markets
Senior Developer

- Built a cloud-based analytics platform for counterparty risk and XVA calculations, working closely with quantitative researchers to translate models into software.
- Replaced proprietary workflow infrastructure with Argo Workflows, giving the team a more flexible way to define and run quantitative workloads.
- Containerized an existing quantitative-modeling library and migrated projects to Linux, improving portability across environments.
- Delivered cloud-agnostic infrastructure across Azure, AWS, and on-premises environments, enabling Monte Carlo simulations to scale dynamically.

AUG 2021 – FEB 2023

FINBOURNE Technology
Engineer

- Joined a fast-moving startup, taking on broad responsibilities beyond engineering as the company and product evolved.
- Developed core capabilities for a cloud-based investment-data management platform, integrating Bloomberg and other market-data vendors.
- Maintained the platform's SDKs and tooling, and designed a marketplace for third-party integrations.
- Managed a small team of junior developers while helping deliver a data-virtualization product.

MAR 2018 – JUL 2021

TD Bank
Senior Developer

- Developed quantitative models for valuation, risk analysis, and hedging across the bank's balance sheet, translating academic methods into production software.
- Helped rewrite the treasury modeling library and decommission its predecessor, including models for negative interest rates and related market scenarios.
- Built and integrated distributed services and messaging infrastructure to connect treasury models with the bank's wider applications and workflows.
- Worked directly with quantitative researchers and developers to translate complex valuation and risk models into reliable treasury applications and services.

SEP 2015 – SEP 2017

Dell
Software Engineer II

- Developed core backup and recovery capabilities for Dell's enterprise data-center software, supporting large-scale Windows, Linux, and SQL Server environments.
- Engineered highly optimized concurrent code for systems processing petabyte-scale data in enterprise data-center environments.

EDUCATION

Bachelor of Science Honours, Computer Science

University of Saskatchewan · 2011 — 2015

— Awarded High Honours
